8.4 The variance in the Administrative Expenses is mainly due to normal annual increments and increase in minimum wage by the Federal Government during the current fiscal year.

Increase in the Financial Charges is due to multifold reasons, but mainly due to the increaase in KIBOR rate.

8.5 All Factory Overheads have been charged directly to the White Sugar Produced and Work in Progress. The method of charging the said overheads to production is based on the Absorption Costing Method.

10 ABNORMAL NON-RECURRING FEATURES

- 10.1 The Company has faced various abnormal features that have affected the production during the year, viz.: Low Cane Recovery, Low Production, High Cane Cost etc. The driving forces behind these abnormalities were: the increase in competition with surrounding Sugar Mills, less rains, heavy frost and the abundance of unapproved, poor quality Sugar Cane varieties.
- 10.2 There were no special expenses incurred during the year that have been charged to White Sugar.

14 COST AUDITORS' OBSERVATIONS AND CONCLUSIONS

To the best of our knowledge and belief, there are no:

- a) matters, which appear to be clearly wrong in principle or apparently unjustifiable;
- b) cases, where the Company's funds have been used in a negligent or inefficient manner;
- c) factors that could have been controlled, but have not been done resulting in the increase in Cost of Production;
 - i) we state that the Company has maintained a good Budgetary Control System; and
 - **ii**) we also state that the Company has setup an effective Internal Audit Function, which is operated through the Head Office, manned by suitably qualified and experienced personnel, who are conversant with the policies and procedures of the Company.

d) Suggestions for Improvements in Performance:

i) Rectification of General Imbalance in Production Facilities:

Our procedures did not reveal any general imbalance in production facilities.

ii) Fuller Utilization of Installed Capacity:

Though the Company has significantly improved its Crushing per Day yet there is space to reduce between the Installed Cane Crushing Capacity and the Capacity Achieved.

iii) Comments on areas offering scope for Cost Reduction, Productivity, Key Limiting Factor, Improved Inventory Policies, Energy Conservancy, State of Technology, whether modern or obsolete; and Plant, whether new or second-hand when installed:

The major component of the cost is Sugar Cane, which should be controlled by having efficient field staff for procurement. Further scientific means should be adopted to determine the Quality of Cane, so as to avoid purchase of Low Quality Cane, which will ultimately enhance the Recovery Rate and Overall Profitability. Besides the cost reduction in purchase of raw material, savings in other Manufacturing Expenses shall be tried. Apart from the non-availability of Sugar Cane, there are no bottlenecks that limit production. Further that the Inventory System is adequate, the utilization of energy is efficient (being utilized at the maximum level) and the plant was new when installed.
